Testimonial

I first met Jeanette Forbes in June 2002 and have been increasing impressed by her since then.

Jeanette's Company, the PCL Group supply IT services and we currently have an ongoing contract to cover all our IT requirements.

Over the years Jeanette has proved to be very supportive of our business and if problems arise, as they can do, Jeanette has always been personally involved in sorting them out and also prepared to go the extra mile to provide a first class service to help our business grow.

Any SME have their problems however in Jeanette's case she has had more than her fair share both in business and domestically however in spite of all these problems she has continued to be a tower of strength when most others would have given up.

I have found her to be patient, polite and professional, very determined to succeed in spite of problems, yet she has never resorted to any shortcuts which would affect her customers and have also found her to be a woman of integrity, something sadly lacking these days.

We have in the course of our discussions with her made suggestions to Jeanette for other areas of our business that we would like her to cover. We have always found that she has been prepared to listen sympathetically and where possible put plans in place to help our business.

I have recommended PCL Group to several of my customers and suppliers and Jeanette is a big part of these recommendations.

Jeanette is definitely a role model for her own generation and will hopefully be a wonderful inspiration to succeeding generations.

Jeanette Forbes proves to anyone who aspires to follow her example that you can succeed in business, with determination, honesty and with a will to win, you can overcome all the difficulties that are thrown at you.

In my experience Jeanette Forbes is unique; I have not come across anyone like her, male or female that I have had as much respect for in my time in business which now extends to over 40 years.

I really do think that she should be preserved for future generations.
